Astronauts

ELA Grade 3 Informational
Annotated Anchors

Note: All released anchors come from the Pilot Test, which did not specifically ask students to cite sources or to use multiple sources. Current Performance Tasks specifically tell students to use multiple sources and to attribute information to reference materials.
PURPOSE/ORGANIZATION
Response

to be an astronaut you require lots of training you have to do everything required. you have to have plans. you also need teamwork. that's what you need.

This brief response has a weak focus with little or no discernible organizational plan. Arguably, to be an astronaut require lots of training, and that's what you need constitute a vague introduction and conclusion. There are no transitional strategies to connect the details, which seem to be randomly selected. Overall, there is no sense of completeness.
Response

THE job of a astrnot is like, floating in a tin can out in a place wehr there is no gravity.
There is nothing like that around earth.

Somtimes astrnots are scared sometimes there not being a astrnot is hard
work, thats my apinyon you may have a difront a pinyon .

THIS is beause,
I like wringing because ,thats my favrot thing to do; some timse astrnots try to stop meders and as-troys .

Some times siontist investigate meters and astrology
most siintistt make little robots that go on the moon and ,they have little cameras so the sinusitis can see the moon and see whit is happening on the moon

SCORE POINT 1

While there is a clear introduction, the main idea in somewhat ambiguous (there is nothing like that around earth), and there is no conclusion. This response has little or no discernible organizational plan with few transitional strategies, in part because supporting details seem randomly included. There are some drifts (e.g., my apinyon is off-purpose).
Response

It is hard to get a job as an astronaut many people work hard to get the job and if you do have an job as a astronaut you need to work hard on training.

Many astronauts get to have a close view at other planets. And many astronauts been on the moon. And astronauts have roebot thingys that can go too other planets that the astronauts can not go to. And many astronauts beleav that there are many galixys. most astronauts trane for 100s of owers. When astronauts come back from space they are very weak.

This response inches into the 2 scoring category. The introduction is weak, but present, and there is no conclusion. Transitions between ideas are weak (And many astronauts... And astronauts have... And many astronauts...). There is an evident progression of ideas: from details about what astronauts do to a brief statement about training along with another brief statement about their physical condition, but the connections do not clarify how they relate to the stated focus of work hard to get job.
Response

What is an Astronaut?
by Britney

Astronauts are people that travel into space. Astronauts go into space because they wanted to look and explore on a planet. Sometimes astronauts just go there for the fun of it. They like to jump and take pictures. But when they do that, you can get sick. Astronauts like to see planets because planets are interesting to see and explore. Most of the time they would collect samples of the planets so they could examine the samples. I think I would like to be an astronaut because I like to look and explore planets and float in space.

Life in Space
by Britney

There is not alot of living things in space, actually. All of the planets have no life exept our planet, Earth. Earth has a atmosphere of oxygen, heat to make us warm, and food we can make. Other planets have no living things because they have no atmosphere and sometimes, no heat. They have nitrogen and carbon dioxide, which are bad gasses. I think it is not fair to only have one planet that has life.

Is the Sun a Planet?
by Britney

Many scientests think that the Sun was a planet. But it is not a planet. It is a star. Stars are hot gasses that glow. People mistaken the Sun because it looked like it is a round ball. But this is no ordanary star. It's known as the Red Giant star. They are stars that evolve from a White Dwarf. Red Giants form when 5 billion years passed. I thought that our Sun was the biggest planet!
This response demonstrates an attempt to organize an article with subtitles or headings. However, the progression of ideas does not match the assigned task (astronaut's job), and so some details are not relevant to the task and are not source-based (sections on earth’s atmosphere and sun as a star). While these sections are drifts from the intended purpose of the assigned task, they likely reflect the writer’s idea of an “article.” The introduction is weak (definition of an astronaut), and there is no conclusion, further confirming the score of 2.
Effective rhetorical questions strengthen the introduction by drawing the audience in, and the conclusion adequately captures the essence of the article (hard work and adventure). Transitional strategies are adequate (When…; But…; …too). The progression of ideas moves from explaining what happens to astronauts in space, to training, and back to what happens to astronauts in space, which is mildly confusing. Nonetheless, the overall organization leads to a sense of completeness, moving this response to the 3 scoring category.
Astronauts

Being an astronaut is a very cool job! I think it is cool because you get to go into space and see all the planets. Also being an astronaut has some bad parts to it too. I’m going to talk about the bad parts first and when I'm done with the bad parts I'll talk about the good parts. One of the bad parts is that your bones and muscles shrink strange... but true. So another bad part is that you have to study for years and you have to also train for hundred of hours. There is 3 levels of training you must pass them all before you leave earth and go to space. When you're training, you learn about science and space. They also learn medical skills so they can keep each other healthy and safe while your in space. They practice riding rovers and other special vehicles that are only meant for space! They even take classes in scuba diving! Have you ever felt the feeling when you are in a pool or ocean? That's how it feels when your in space. Since there is all different kinds of astronauts who all have different kinds of jobs, some of the training is different. That is all that is good and bad about astronauts!

This response has an evident organizational structure, though some minor flaws are demonstrated. The introduction states a general opinion (Being an astronaut is cool!), and the main idea is vague (good and bad parts); the conclusion repeats this main idea. The writer tells the writer what the organization is – bad parts first and followed by good parts - although it isn’t clear when the transition occurs (the training is introduced as a bad part, but scuba and riding rovers are presented as seemingly good aspects). Overall, the response is generally focused and adequately sustained to earn a score point 3 despite some copied text.
Response

What Does an Astronaut Do?

Being an astronaut is not an easy job. They don't just go to space to go sight seeing, they are there to learn about the wonderful things about space. You have to go to school for at least 18 years. After all that time studying you have to train for a very long time. Maybe even up to 130 hours of training.

Astronauts have to get plenty of exercise to stay healthy. Even in space!!!! If they don't they will get weak. They use big rubber bands and hook them around their shoulders. Then they bend their knees and press against the rubber bands to make their legs stronger. Then the do their arms by standing on the band and pulling their arms up over their head.

When astronauts are in space their body changes. For the first week they are in space the might feel a little sick but they get used to it after a while. They also might feel weightless. That is what causes them to feel sick.
This response demonstrates an adequate organizational structure. The introduction is effective (adding a [3rd grade] humorous detail about astronauts not being in space to sightsee). The conclusion, however, is noticeably absent. The main idea focuses on astronaut training, and it is sustained throughout. Connections between and among ideas are generally clear (if..., [then]; after all that time; That is what causes...).
Astronauts

Have you ever thought about what it's like to be an astronaut? You might think that it would be a lot of fun but going into space is very hard. There is a lot of work to do before you go actually go to space. Before you become an astronaut, you have to be educated. Astronauts go to school for 12 years, then go to college for 4 years, and after that they study for two years or more. That's 18 years in total! Can you imagine that?

After school, there's training. These pre-astronauts will train for hundreds of hours to become an astronaut! They will learn what it is like to be in the International Space Station (ISS) and they will ride in vehicles made for space. They will also take scuba diving lessons because the feeling of being in a suit underwater is very similar to the feeling in space. Another thing they do in the training is get jobs. Some of the jobs are being a medical person so in case someone gets hurt or sick they can be healed, being a fixer so if the ship breaks down or catches on fire they can try to fix it, a pilot who can fly the rocket, a leader to make sure everyone does their job, and a scientist who can study how living things such as plants and animals survive in space.

Finally, it's time to blast off into space. This is a once in a lifetime event. You might be saying "Yay! Yippee! This is the fun part!" You are right and wrong if you said that. Being in space may be fun but is also very dangerous. When you are in space you feel as if you weigh nothing. You float around the spaceship. This is not good for your body. Your blood flows up to your head. Your head and neck get puffy and your legs get small and thin. This condition is called "bird legs". Your muscles don't work hard and get weak and shrink. When you get back to earth it is hard to stand because you are weak. You
You have to adjust. That means that when you are in space you have to exercise. The use big rubber bands and they stretch in them in different ways.

Being in space is fun also because you can see everything on earth. Maybe when you grow up you will be an astronaut, too.
EVIDENCE/ELABORATION
There is minimal evidence for the vague main idea (training and teamwork), and those few supporting details are not elaborated. The language is vague (everything required, plans) and repetitive (require, required). The brevity of the response further confirms a score of 1.
Response

THE job of a astrnot is like, floating in a tin can out in a place wehr there is no gravity.
There is nothing like that around earth.

Somtims astrnots are scared sometimes there not being a astrnot is hard
work, thats my apinyon .you may have a difront a pinyon .

THIS is beause,
I like wringing because ,thats my favrot thing to do; some timse astrnots try to stop meders and as-troys .

Some times siontist investigate meters and astrology
most siintisst make little robots that go on the moon and ,they have little cameras so the sinusitis can see the moon and see wht is happening on the moon

SCORE POINT

1

This response addresses the topic, but minimal evidence from the source material is present (no gravity, robots). The integration of some details lack a clear explanation (some times astrnots try to stop meders and as-troys). Some elaboration is effective ([being an astronaut is] like floating in a tin can out in a place wehr there is no gravity); but some other elaboration is ineffective (thats my apinyon .you may have a difront a pinyon). Overall, the development matches criteria for the 1 score point category.
Some cursory evidence from the source materials is used, but it is weakly integrated. Elaboration is either weak (...have roebot thingys that can go too other planits that the asonausts can not go to) or not supported by text (many astronauts benn on the moon; many astronauts beleav that there are many galixys). Overall, the weak but attempted development of source-based ideas is sufficient to move this response into the 2 scoring category.
Response

What is an Astronaut?
by Britney

Astronauts are people that travel into space. Astronauts go into space because they wanted to look and explore on a planet. Sometimes astronauts just go there for the fun of it. They like to jump and take pictures. But when they do that, you can get sick. Astronauts like to see planets because planets are interesting to see and explore. Most of the time they would collect samples of the planets so they could examine the samples. I think I would like to be an astronaut because I like to look and explore planets and float in space.

Life in Space
by Britney ........

There is not alot of living things in space, actually. All of the planets have no life except our planet, Earth. Earth has a atmosphere of oxygen, heat to make us warm, and food we can make. Other planets have no living things because they have no atmosphere and sometimes, no heat. They have nidrogen and carbon dioxide, which are bad gasses. I think it is not fair to only have one planet that has life.

Is the Sun a Planet?
by Britney

Many scientests think that the Sun was a planet. But it is not a planet. It is a star. Stars are hot gasses that glow. People mistaken the Sun because it looked like it is a round ball. But this is no ordanary star. It's known as the Red Giant star. They are stars that evoive from a White Dwarf. Red Giants form when 5 billion years passed. I thought that our Sun was the biggest planet!
The support for the assigned task – an article about the job of an astronaut – is uneven. Some details are neither relevant nor source-based (sections on earth’s atmosphere and sun as a star), and even the relevant source-based ideas in paragraph 1 are weakly developed (Sometimes astronauts just go [to space] for the fun of it is not a source-based conclusion). Elaboration via commentary (I think I would like to be an astronaut because I like to look and explore planets and float in space, and I think it is not fair to only have one planet with life) do not adequately support the main idea. Some precise vocabulary (...so they could examine the samples...; ...that evolve from the White Dwarf) and the writer’s style (This is no ordinary star) do not compensate for the weak elaboration, keeping this response in the 2 scoring category.
Response

Have you ever want go to space? Ever want to see the moon up close? You can do this if you are an astronaut. Astronauts are people who are sent to space to study about the solar system. They live in space stations for months. Sometimes being an astronaut is hard. Since there is no gravity in space your muscles are not used as much. When that happens, your muscles get smaller and weaker. But do not worry, space staitions have gyms set up so you can keep your muscles strong.

Training to be a astronaut is hard too. You have to spend hundred of hours learning to do weightless training and medical skills. You also have to learn about space and science. Sometimes you have to get use to floating because you feel dizzy or sick. When you get into space strange things happen. Your head get puffy and neck gets bigger. That’s because most of your blood is traveling to your head. At the same time, your legs get smaller. We call this bird legs. When astronauts come back from space they need to get use to get use to standing on the ground again. They work hard and have many adventures.

SCORE POINT 3

This response provides adequate support for the main idea although most of the information comes from one source. Integration is adequate for this grade level. For example, the writer takes text-based details, and paraphrases them by posing cause/effect statements (Since there is no gravity in space your muscles are not used as much. When that happens, your muscles get smaller and weaker) followed by commentary combined with text detail (But do not worry, space staitions have gyms set up...). There is a sense of style; for example, the writer has changed the point of view from “they” to “you,” making the audience feel personally addressed (Have you ever want to go to space? You can do this if you are an astronaut; When you get into space, strange things happen. Your head gets puffy.....)
Response

Being an astronaut is a very cool job! I think it is cool because you get to go into space and see all the planets. Also being an astronaut has some bad parts to it too. I'm going to talk about the bad parts first and when I'm done with the bad parts I'll talk about the good parts. One of the bad parts is that your bones and muscles shrink strange... but true. So another bad part is that you have to study for years and you have to also train for hundred of hours. There is 3 levels of training you must pass them all before you leave earth and go to space. When you're training, you learn about science and space. They also learn medical skills so they can keep each other healthy and safe while your in space. They practice riding rovers and other special vehicles that are only meant for space! They even take classes in scuba diving! Have you ever felt the feeling when you are in a pool or ocean? That's how it feels when your in space. Since there is all different kinds of astronauts who all have different kinds of jobs, some of the training is different. That is all that is good and bad about astronauts!
The paraphrasing and integration of source-based details are good although the details in the middle of the paragraph are copied (but not attributed or quoted). There is little specific elaboration or development of these details; however, commentary does serve as one elaboration strategy (your bones and muscles shrink...strange but true). The style is uneven, ranging from distracting (I'm going to talk about the bad parts first and when I'm done with the bad parts I'll talk about the good parts) to effective use of language (you must pass ... all [3 levels of training] before you leave earth and go to space). Overall, the response is adequately developed for a score of 3.
Response

What Does an Astronaut Do?

Being an astronaut is not an easy job. They don't just go to space to go sightseeing, they are there to learn about the wonderful things about space. You have to go to school for at least 18 years. After all that time studying you have to train for a very long time. Maybe even up to 130 hours of training.

Astronauts have to get plenty of exercise to stay healthy. Even in space!!!!! If they don't they will get weak. They use big rubber bands and hook them around their shoulders. Then they bend their knees and press against the rubber bands to make their legs stronger. Then they do their arms by standing on the band and pulling their arms up over their head.

When astronauts are in space their body changes. For the first week they are in space the might feel a little sick but they get used to it after a while. They also might feel weightless. That is what causes them to feel sick.
This response provides convincing support for the main idea (astronaut training). Elaboration comes by drawing logical conclusions from text-based evidence (...maybe even up to 130 hours; ...then they do their arms by standing on the band and pulling their arms up over their head). Vocabulary is clearly appropriate and enhances the style of the response (They don’t just go to space to go sight seeing; Even in space!).
Response

Astronauts

Have you ever thought about what it's like to be an astronaut? You might think that it would be a lot of fun but going into space is very hard. There is a lot of work to do before you go actually go to space. Before you become an astronaut, you have to be educated. Astronauts go to school for 12 years, then go to college for 4 years, and after that they study for two years or more. That's 18 years in total! Can you imagine that?

After school, there's training. These pre-astronauts will train for hundreds of hours to become an astronaut! They will learn what it is like to be in the International Space Station (ISS) and they will ride in vehicles made for space. They will also take scuba diving lessons because the feeling of being in a suit underwater is very similar to the feeling in space. Another thing they do in the training is get jobs. Some of the jobs are being a medical person so in case someone gets hurt or sick they can be healed, being a fixer so if the ship breaks down or catches on fire they can try to fix it, a pilot who can fly the rocket, a leader to make sure everyone does their job, and a scientist who can study how living things such as plants and animals survive in space.

Finally, it's time to blast off into space. This is a once in a lifetime event. You might be saying "Yay! Yippee! This is the fun part!" You are right and wrong if you said that. Being in space may be fun but is also very dangerous. When you are in space you feel as if you weigh nothing. You float around the spaceship. This is not good for your body. Your blood flows up to your head. Your head and neck gets puffy and your legs get small and thin. This condition is called "bird legs". Your muscles don't work hard and get winkle and shrink. When you get back to earth it is hard to stand because you are weak. You have to adjust. That means that when you are in space you have to exersize. The use big rubber bands and they stretch in them in different ways.

Being in space is fun also because you can see everything on earth. Maybe when you grow up you will be an astronaut, too.
Evidence is relevant, specific, and well-integrated with selection of details from both sources. A variety of elaborative techniques are effectively used (scenarios/examples: *if the ship breaks down or catches on fire they can try to fix it...*; commentary: *This is a once in a lifetime event*, and *Can you imagine that?*; and speculation: *you might be saying “Yay! Yippee!...”*; *When you grow up you will be an astronaut, too*). Some precise vocabulary (*pre-astronauts*) enhances the style.
Note: The conventions anchor set is composed of samples from several different grade 3 Performance Tasks. The analysis of grade-specific conventions, however, is not purpose-specific; therefore, teachers can use the following anchors regardless of task.
The response demonstrates little or no command of conventions –

- Frequent misspellings cause confusion (cope; nigt, sherech, intle, etc.), and there are problems with plurals (bat instead of bats).
- Grammar usage problems include errors with frequently confused words (there instead of they’re; were instead of where). It’s unclear whether problems such as bat make and bat help are problems with basic subject/verb agreement or forming plural nouns.
- Sentence formation problems are stylistic “on-and-on” sentences, not convention errors* per se.
- The word texas should have a capital letter.

The frequency, severity, and variety of errors in this very short response confirm a score of 0.

*To be considered conventions errors, errors with sentence structure must be “correctable” with punctuation (comma splice or fused sentences).
The response demonstrates little or no command of conventions -

- Prolific grade-appropriate **spelling** errors are distracting (thay, shaer, fand, chravled, montes, ther ollong, stof).
- **Grammar usage** errors include inappropriate use of past and present verbs (...eat...chravled...fand).
- **Sentence formation** errors include a fragment (treky ane pork and iots of stof). Note: “on-and-on” sentences (such as But on Thanksgiving they share food and get along and eat) are considered a style flaw, not a conventions error.*
- There are **capitalization** errors at the beginnings of sentences and with proper nouns (pligerms, maflaer, natoamarecens).
- There are grade-appropriate **punctuation** errors including an apostrophe to form a contraction (dint).

The high number of errors relative to the length of the response confirms the score of 0.

*To be considered conventions errors, errors with sentence structure must be “correctable” with punctuation (comma splice or fused sentences).
Response
The pilgrims eat nasty food and they chrawled in the maflaer for 2montes fand ther new home. And the pilgres and the natoamarecens dint get ollong. but on thank giving thay shaer food and get ollong and eat.treky ane pork and iots of stof.

This response reflects a partial command of 3rd grade conventions -

- There are some errors in grade-appropriate spelling words (on instead of one, arond, dieing).
- Grammar usage errors include incorrect use of irregular verb in past tense (THEN the pilgrims meet Squanto) and an error with a frequently confused word (there instead of their).
- Sentence formation errors include a fused sentence (They were dieing when they got of the ship it was sad).
- The word pilgrims should be capitalized.

Overall, the use of conventions is adequate enough to earn a score of 1.
This response demonstrates a partial command of conventions -

- Errors in **spelling** grade-appropriate words are somewhat frequent (windo, alot, in side/out side, firfiter, friends, vists, humen). The response also shows systematic errors with plurals (animal(s), humen(s)).

- **Grammar usage** errors include an error with simple subject/verb agreement (he still see), and an error with a frequently confused word (weak instead of week).

- Errors with **sentence formation** include fused sentences (Last year I was waking my dog he styrated to run fast when sudenly we saw a bulding burning; and I let go of the liesh my dog ran as fast he could in side the bulding.)

The frequency and severity of errors keep this response at the 1 level.
Response

I think the Mars Rover is the most important invention because it helped scientists find what it is like on Mars. The 1st Mars rover was made by Donna Shirley. She worked with a group of scientists.

Now I will tell you about the 1st Mars rover. It was the size of a microwave oven. It had two pairs of three wheels.

This response demonstrates an adequate command of conventions. Though it is brief, only one minor error in capitalization is demonstrated.

SCORE POINT 2
Response

A pilgrim child's journey started when they were very young like twelve years old and up. One day a pilgrim child was getting ready for her journey across the ocean. She was walking along their trail to the pilgrims' houses. They left a trail so no one could get lost heading back home. She thought traveling across the ocean to a new land maybe sound fun but, the other kids did not think it was fun because they had to leave all of their stuff behind. The girl named rose did not like it either but she liked to try new things that she has not done before. The other kids did not like to try new things they just liked to work and help their families. When they sailed across the ship they didn't like it because this trip wasn't a vacation that they had planned for. The ship had no private rooms, no dinning rooms, no nice bathrooms. The food went bad as they got older they started to be more hungrier because they didn't get a lot of food when they were younger.

SCORE POINT

2

This response demonstrates an adequate command of 3rd grade conventions -
- There is a single error in punctuation (a missing apostrophe for the possessive of pilgrims).
- The word pilgrim and the name rose should be capitalized.
- There are errors in sentence formation including fused sentences (The food went bad as they got older they started to be more hungrier because they didn't get a lot of food when they were younger; and The other kids did not like to try new things they just liked to work and help their families).
- There are isolated errors in grammar usage: an error with a comparative adjective (more hungrier), and an error in verb tense (sound instead of sounded).

Overall, the errors are not severe or frequent enough to keep the response from earning a 2.
Response

Jack Skeen started his long, boaring but merackules jerney to the new world in sixteen twenty. He got on the bot complaning to his mom that he was hungry and needed to yous th bathroom,his mom told him that he would be able to eat at dinner,and for the bathroom, he would need to ask the captan that.Jack walked away mumbeling to himself "Oh great, i'm stuck in a ship, have to ask the capten were the bathroom is and can't eat anything for like 3 hours, just great". CREEK! CREEK! "mmph!""They should realey fix this floor"!"Uh,hi Mr.capten sir,uh I was woudering were the bathroom would be?""Down the stairs past a corner and to your left". (He said with a loud booming voice)."Uh,thankyou,thank you very much". Shreeked Jack a little scared.CREEK! CREEK! "Grrr"!"Ah,ha,here we are.SSSS!,ah,that feels alot better.Three hours later,"WAHAT"!!!"ONLY SOME CRACKERS AND SOME BAKEN BITS"!!!"Sereaslly, thats the only thing we can eat"? Asked Jack."Yes".said his mother."But mom"!"now stop complaning and eat your dinner"!"O,ok".

"Actually, that was pretty good"Said jack."See"Said his mother. "But I'm still hungry"."Oh, come on"Complaned his mother.

This went on for the rest of the trip, exept the food got wet,mdoly and went bad,also, some times they ate the food that went bad exept the passengers could not taste it because the men ho coocked and handed the food out put spices on them to cover it up.

Two months after the passengers left thiere hometown Ingland,they reeached the new world ,nowadays known as Plymith Masichusets.

"B,brrr,m,m,mom its co,cold".Wimpered Jack. "Oo honey, have my jacket"."Th,thanks mom.

Response continues onto the following page
Two months later, Jack and the other pilgrims were able to eat more than biscuits because of there new friends, the native americans. They tought Jack and the other pilgrims how to grow Corn, Barly and Peas. The Native americans also tought the pilgrims how to hunt for like birds and deer. The pilgrims found berries and fruits, and learned how to fish as well. By the time fall came around, the pilgrms realized they had much to be thankful for. They did not have pumpkin pie on the first thanks giving but there was fresh food. There was even inugh food for the long, cold winter ahead of them. And there was lots and lots to be thankful for.

So, long story short. AND THEY LIVED HAPELLY EVER AFTER,

THE
END!!!

| Conventions | The response demonstrates an adequate command of conventions:  
- adequate use of correct sentence formation, punctuation, capitalization, grammar usage, and spelling | The response demonstrates a partial command of conventions:  
- limited use of correct sentence formation, punctuation, capitalization, grammar usage, and spelling | The response demonstrates little or no command of conventions:  
- infrequent use of correct sentence formation, punctuation, capitalization, grammar usage, and spelling | Insufficient (includes copied text)  
- In a language other than English  
- Off-topic  
- Off-purpose |

Holistic Scoring:
- **Variety**: A range of errors includes sentence formation, punctuation, capitalization, grammar usage, and spelling.
- **Severity**: Basic errors are more heavily weighted than higher-level errors.
- **Density**: The proportion of errors to the amount of writing done well. This includes the ratio of errors to the length of the piece.
