

Illustration Glossary

Accessibility Resource for Mathematics

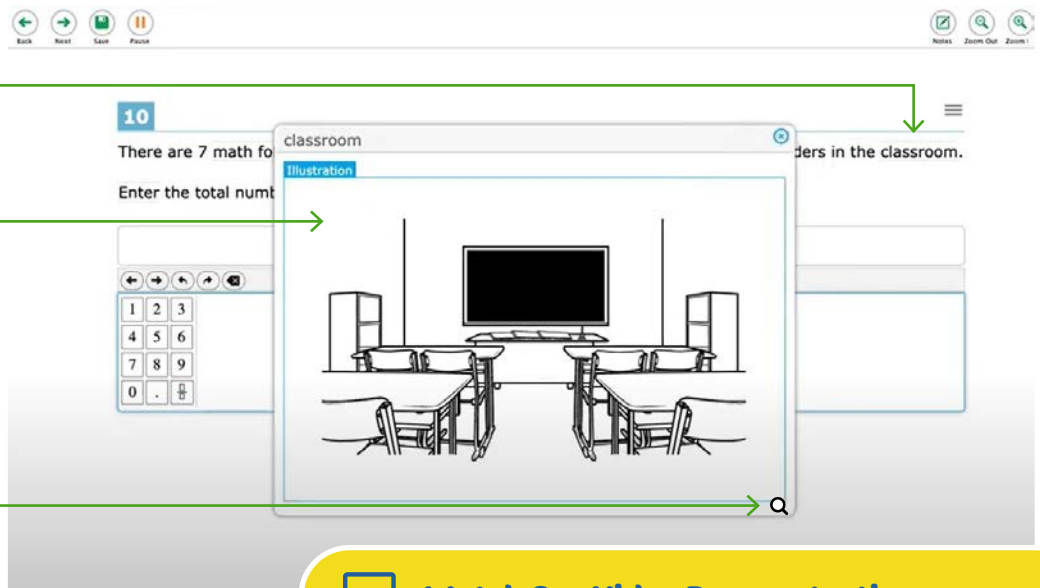

The illustration glossary is a Designated Support for mathematics to help students understand words or phrases in test questions when they may not benefit from the text-based glossaries (currently offered in English and 13 other languages) or American Sign Language videos.

The illustration glossary is available for practice tests, interim assessments, and summative assessments. For paper-pencil forms, illustration glossaries are available in paper-based supplements.

A dotted line above or below a word or phrase indicates an available illustration.

When students hover over the term, it becomes highlighted, and when it is selected, a pop-up window with the illustration appears.

Students can adjust the size and placement of each illustration depending on their needs and preferences.

Which students most benefit from the illustration glossary?

- English learners (ELs)
- Students with varying proficiency in one of the current translated glossary languages who would benefit from current illustration supports
- Students who are deaf/hard of hearing and use sign systems other than American Sign Language
- Students whose primary languages are not included in the text-based glossaries

Where can I learn more about the illustration glossary?
