The Smarter Balanced Focused Interim Assessment Blocks (FIABs) are one type of interim assessment being made available by the Consortium; the other types are the Interim Comprehensive Assessment (ICAs) which are similar in structure and follow the same blueprint as the summative assessment, and the Interim Assessment Blocks (IABs) which are snapshots of student performance on multiple targets. FIABs are short, focused sets or blocks of items that measure one or more Claim 1 assessment targets. Results from these assessments provide information about a student’s strengths or needs in relation to the Common Core State Standards (CCSS) and, therefore, generate more detailed information for instructional purposes than the summative assessment or ICAs alone. All types of interim assessments are currently available as fixed forms. The fixed forms are administered online, using the same delivery software as the summative assessments.

This blueprint presents the specific blocks that are available by grade level for mathematics beginning at grade 3 and continuing through high school. Each block-level blueprint contains information about claim(s), assessment target(s), and depth of knowledge (DOK) level(s) addressed by the items in that block as well as the numbers of items allocated to each of those categories.

The blueprint can be used by educators to plan how to integrate the IABs and FIABs effectively within classroom instruction or to better understand results that are reported. Users of the blueprint can become familiar with the number of IABs/FIABs for each grade level, the general focus of each, (i.e., which assessment targets are addressed in a specific IAB or FIAB and the emphasis of each target relative to the other targets in the block). A fifth-grade teacher, for example, may wish to collect more information regarding her students’ knowledge about geometry. The teacher could use this blueprint to see that there is a block for geometry composed of 13 machined-scored items across the four claims—concepts and procedures, problem solving, modeling and data analysis, and communicating reasoning. After reading the blueprint, she will have a better understanding of the meaning of the geometry block.

Finally, educators can use these FIAB as well as the IAB blueprints in conjunction with the summative and ICA blueprints to support more comprehensive classroom-level instruction and assessment plans.

<th>DOK</th>
<th>Number of Items</th>
<th>Total Items per Reporting Category</th>
</tr>
</thead>
</table>
| 1. Concepts and Procedures | NF | G. Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers.  
- The student adds and subtracts fractions with like denominators by joining and separating parts referring to the same whole.  
- The student expresses an equivalent form of a fraction or mixed number by considering each as a sum of fractions with the same denominator.  
- The student solves contextual problems involving addition and subtraction of fractions referring to the same whole and having like denominators by using visual fraction models and equations to represent the problem.  
- The student represents a fraction \( \frac{a}{b} \) as a multiple of \( \frac{1}{b} \).  
- The student multiplies a fraction by a whole number.  
- The student solves contextual problems involving the multiplication of a fraction by a whole number by using visual fraction models and equations to represent the problem. | 1, 2 | 12 | 12 |
| 2. Problem Solving | Problem Solving | A. Apply mathematics to solve well-posed problems in pure mathematics and those arising in everyday life, society, and the workplace.  
- The student solves a multi-step problem with the four operations in a context involving measurement quantities.  
- Solving the problem requires one or more steps consisting of one of the four operations with whole numbers or fractions (division of fractions is limited to division of a whole number by a unit fraction or a unit fraction by a whole number). | 2, 3 | 2 | 2 |

— Claim 1 Target Descriptions are illustrated by the Evidence Required statements which are provided comprehensively.  
— Claim 2, 3, and 4 Targets Descriptions are illustrated by the Task Model Expectations which are aligned to individual interim items.
## GRADE 5 – Numerical Expressions (14 items)

<table>
<thead>
<tr>
<th>Claim</th>

<th>Total Items per Reporting Category</th>
</tr>
</thead>
</table>
| 1. Concepts and Procedures | OA | A. Write and interpret numerical expressions.  
- The student writes or identifies a numerical expression that records a calculation represented with words.  
- The student interprets numerical expressions in words without evaluating them.  
- The student evaluates numerical expressions with grouping symbols. | 1, 2 | 14 | 14 |

## GRADE 5 – Operations with Whole Numbers and Decimals (12 items)

<table>
<thead>
<tr>
<th>Claim</th>
<th>Content Category</th>
<th>Assessment Targets</th>
<th>DOK</th>
<th>Number of Items</th>
<th>Total Items per Reporting Category</th>
</tr>
</thead>
</table>
- The student multiplies multi-digit whole numbers.  
- The student determines whole-number quotients of whole numbers with up to four-digit dividends and two-digit divisors using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division.  
- The student adds, subtracts, multiplies, and divides decimals to the hundredths using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction. | 1, 2 | 11 | 11 |
| 3. Communicating Reasoning | Communicating Reasoning | C. State logical assumptions being used.  
- The student will be given one or more definitions or assumptions and be asked to reason from that set of definitions and assumptions. | 3 | 1 | 1 |

— Claim 1 Target Descriptions are illustrated by the Evidence Required statements which are provided comprehensively.  
— Claim 2, 3, and 4 Targets Descriptions are illustrated by the Task Model Expectations which are aligned to individual interim items.
## GRADE 5 – Add and Subtract with Equivalent Fractions (15 items)

<table>

## GRADE 5 – Geometry (13 items)

<table>
<thead>
<tr>
<th>Claim</th>
<th>Content Category</th>
<th>Assessment Targets</th>
<th>DOK</th>
<th>Number of Items</th>
<th>Total Items per Reporting Category</th>
</tr>
</thead>
</table>
| 1. Concepts and Procedures | G | J. Graph points on the coordinate plane to solve real-world and mathematical problems.  
- The student interprets coordinate values of points graphed on a coordinate plane, or in the context of a given situation.  
- The student graphs points on the coordinate plane representing real-world or mathematical problems. | 1 | 5 | 9 |
| 1. Concepts and Procedures | G | K. Classify two-dimensional figures into categories based on their properties.  
- The student classifies two-dimensional figures into categories and/or subcategories based on their properties. | 2 | 4 |  |
- Items require the student to identify quantities of interest and map their relationships, often via diagrams or equations. | 2 | 1 | 2 |
| 4. Modeling and Data Analysis | Modeling and Data Analysis | F. Identify important quantities in a practical situation and map their relationships (e.g., using diagrams, two-way tables, graphs, flow charts, or formulas).  
- The student is asked to solve a problem that may require the integration of concepts and skills from multiple domains. | 2 | 1 |  |
| 3. Communicating Reasoning | Communicating Reasoning | E. Distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in the argument—explain what it is.  
- The student is presented with valid or invalid reasoning and asked to determine its validity. If the reasoning is flawed, the student will explain or correct the flaw.  
C. State logical assumptions being used.  
- The student is asked to identify an unstated assumption that would make the problem well-posed or allow them to solve a problem using a given method. | 2, 3 | 2 | 2 |

---

— Claim 1 Target Descriptions are illustrated by the Evidence Required statements which are provided comprehensively.  
— Claim 2, 3, and 4 Targets Descriptions are illustrated by the Task Model Expectations which are aligned to individual interim items.
### GRADE 5 – Place Value System (11 items)

<table>
<thead>
<tr>
<th>Claim</th>
<th>Content Category</th>
<th>Assessment Targets</th>
<th>DOK</th>
<th>Number of Items</th>
<th>Total Items per Reporting Category</th>
</tr>
</thead>
</table>
| 1. Concepts and Procedures | NBT | C. Understand the place value system.  
- The student represents powers of 10 by using whole-number exponents.  
- The student reads and writes decimals to the thousandths using base-ten numerals, number names, and expanded form.  
- The student compares two decimals to the thousandths by using >, =, and < symbols.  
- The student rounds decimals to the nearest whole number, tenth, or hundredth. | 1, 2 | 10 | 10 |
| 3. Communicating Reasoning | Communicating Reasoning | A. Test propositions or conjectures with specific examples.  
- The student is presented with a proposition or conjecture and asked to give examples and non-examples if the claim is sometimes true. | 2 | 1 | 1 |

— Claim 1 Target Descriptions are illustrated by the Evidence Required statements which are provided comprehensively.
— Claim 2, 3, and 4 Targets Descriptions are illustrated by the Task Model Expectations which are aligned to individual interim items.
## GRADE 5 – Convert Measurements (13 items)

<table>
<thead>
<tr>
<th>Claim</th>
<th>Content Category</th>
<th>Assessment Targets</th>
<th>DOK</th>
<th>Number of Items</th>
<th>Total Items per Reporting Category</th>
</tr>
</thead>
</table>
| 1. Concepts and Procedures   | MD               | G. Convert like measurement units within a given measurement system.  
• The student converts units of linear measure within a single measurement system.  
• The student converts units of weight/mass measure within a single measurement system.  
• The student converts units of liquid volume measure within a single measurement system.  
• The student converts units of time measure within a single measurement system. | 1   | 6               | 6                                  |
| 2. Problem Solving           | Problem Solving  | A. Apply mathematics to solve well-posed problems in pure mathematics and those arising in everyday life, society, and the workplace.  
• The student solves a multi-step problem with the four operations in a context involving measurement quantities.  
B. Select and use appropriate tools strategically.  
• Mathematical information from the context is presented in a table, graph, or diagram, or is extracted from a verbal description or pictorial representation of the context.  
D. Identify important quantities in a practical situation and map their relationships (e.g., using diagrams, two-way tables, graphs, flowcharts, or formulas).  
• The student is asked to solve a problem that may require the integration of concepts and skills from multiple domains.  
• The student is presented with a mathematical problem in a real-world context where the quantities of interest are not named explicitly, are named but represented in different ways, or the relationship between the quantities is not immediately clear. | 2   | 4               | 5                                  |
| 4. Modeling and Data Analysis| Modeling and Data Analysis | C. State logical assumptions being used.  
• Tasks have either more information than is needed solve the problem (and students must choose) or not enough information (and students must make a reasoned estimate). | 2   | 1               |                                    |
| 3. Communicating Reasoning   | Communicating Reasoning | B. Construct, autonomously, chains of reasoning that will justify or refute propositions or conjectures.  
• Items for this target can require students to solve a multi-step, well-posed problem involving the application of mathematics to a real-world context.  
C. State logical assumptions being used.  
• The student must explicitly identify assumptions that make a particular solution method viable. | 2   | 2               | 2                                  |

<tr>
<th>Claim</th>
<th>Content Category</th>
<th>Assessment Targets</th>
<th>DOK</th>
<th>Number of Items</th>
<th>Total Items per Reporting Category</th>
</tr>
</thead>
</table>
| 1. Concepts and Procedures | NS | D. Apply and extend previous understandings of numbers to the system of rational numbers.  
- The student uses positive and negative numbers to represent quantities in real-world contexts.  
- The student can identify the location of ordered pairs on the coordinate plane based on the signs of the numbers in an ordered pair.  
- The student locates and positions integers and other rational numbers on a number line.  
- The student positions ordered pairs of integers and other rational numbers on a coordinate plane.  
- The student writes and interprets statements about the order of rational numbers in real-world contexts.  
- The student represents the absolute value of a rational number as the distance from zero on a number line.  
- The student can make comparisons of absolute value from statements about order.  
- The student solves real-world and mathematical problems by graphing ordered pairs on a coordinate plane and using coordinates and absolute value to find the distances between points with same first coordinate or same second coordinate. | 1, 2 | 5 | 5 |
| 3. Communicating Reasoning | Communicating Reasoning | C. State logical assumptions being used.  
- The student will be given one or more definitions or assumptions and be asked to reason from that set of definitions and assumptions.  
D. Use the technique of breaking an argument into cases.  
- The student is given a proposition and asked to determine in which cases the proposition is true.  
- The student is given a problem that has a finite number of possible solutions, some of which work and some of which don’t.  
E. Distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in the argument—explain what it is.  
- The student is presented with valid or invalid reasoning and asked to determine its validity. If the reasoning is flawed, the student will explain or correct the flaw.  
F. Base arguments on concrete referents such as objects, drawings, diagrams, and actions.  
- The student uses concrete referents to help justify or refute an argument.  
- Items may focus on the use of number lines. | 2, 3 | 6 | 6 |

• The student explains and uses the relationship between the sine and cosine of complementary angles.  
• The student uses the Pythagorean Theorem and trigonometric ratios to solve problems involving right triangles in mathematical or real-world context. | 1, 2 | 11 | 11 |
• Solving the problem requires either using units, setting up and solving an equation or system of equations, building and interpreting equations or functions that represent relationships between quantities, finding or calculating geometric measures, or reasoning about geometric figures in the plane. | 3 | 1 | 1 |
| 3. Communicating Reasoning | Communicating Reasoning | A. Test propositions or conjectures with specific examples.  
• The student is presented with a proposition or conjecture and asked to give a counterexample if the claim is false.  
C. State logical assumptions being used.  
• The student will be given one or more definitions or assumptions and will be asked to reason from that set of definitions and assumptions.  
F. Base arguments on concrete referents such as objects, drawings, diagrams, and actions.  
• Some flawed reasoning or student work is presented and the student identifies and/or corrects the error or flaw. | 2, 3 | 3 | 3 |

— Claim 1 Target Descriptions are illustrated by the Evidence Required statements which are provided comprehensively.  
— Claim 2, 3, and 4 Targets Descriptions are illustrated by the Task Model Expectations which are aligned to individual interim items.

<th>DOK</th>
<th>Number of Items</th>
<th>Total Items per Reporting Category</th>
</tr>
</thead>
</table>
| 1. Concepts and Procedures | NQ | K. Understand the concept of a function and use function notation.  
- The student understands that a function from one set (the domain) to another set (the range) assigns to each element of the domain exactly one element of the range (e.g., distinguish between functions and non-functions).  
- The student understands that the graph of \( f \) is the graph of the equation \( y = f(x) \).  
- The student recognizes that sequences are functions whose domain is a subset of the integers. | 1, 2 | 3 | 10 |
| 1. Concepts and Procedures | NQ | L. Interpret functions that arise in applications in terms of the context.  
- The student interprets key features of a graph or a table representing a function modeling a relationship between two quantities.  
- The student sketches graphs showing key features given a verbal description of a relationship between two quantities that can be modeled with a function.  
- The student relates the domain of a function to its graph and, where applicable, to the quantitative relationship it describes.  
- The student calculates and interprets the average rate of change of a function presented symbolically or as a table and estimates the rate of change of a function from a graph. | 1, 2 | 7 | 1 |
| 2. Problem Solving | Problem Solving | C. Interpret results in the context of a situation.  
- Mathematical information from the context is presented in a table, graph, or diagram, or is extracted from a verbal description or pictorial representation of the context. | 2 | 1 | 3 |
- The student is asked to solve a problem arising in everyday life, society, or the workplace using functions, geometric modeling, probability, or statistics.  
D. Interpret results in the context of a situation.  
- The student interprets the solution to the problem in terms of the model or compares the results of the model with the real-world data it represents. | 3 | 2 | 3 |
| 3. Communicating Reasoning | Communicating Reasoning | G. At later grades, determine conditions under which an argument does and does not apply.  
- Items for this target focus on the core mathematical work that students are doing around the real number system, algebra, functions, and geometry. | 3 | 1 | 1 |
# High School – Seeing Structure in Expressions/Polynomial Expressions (15 items)

<table>
<thead>
<tr>
<th>Claim</th>
<th>Content Category</th>
<th>Assessment Targets</th>
<th>DOK</th>
<th>Number of Items</th>

</table>
• The student uses the structure of an expression to identify ways of rewriting it. | 1, 2 | 4 |
|       | A | E. Write expressions in equivalent forms to solve problems.  
• The student understands that the factored form of a quadratic expression reveals the zeros of the function it defines.  
• The student understands that completing the square for a quadratic expression reveals the maximum or minimum value of the function it defines.  
• The student uses the properties of exponents to transform exponential expressions. | 1, 2 | 2
|       | A | F. Perform arithmetic operations on polynomials.  
• The student adds or subtracts polynomials.  
• The student multiplies polynomials. | 2 | 5 |
| 4. Modeling and Data Analysis | Modeling and Data Analysis | D. Interpret results in the context of a situation.  
• The student interprets the solution to the problem in terms of the model or compares the results of the model with the real-world data it represents. | 3 | 1 |
| 3. Communicating Reasoning | Communicating Reasoning | D. Use the technique of breaking an argument into cases.  
• The student is given a problem that has a finite number of possible solutions that need to be treated on a case-by-case basis.  
• The student is given a proposition and asked to determine in which cases the proposition is true.  
E. Distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in the argument—explain what it is.  
• The student is presented with valid or invalid reasoning and asked to determine its validity. If the reasoning is flawed, the student will explain or correct the flaw.  
F. Base arguments on concrete referents such as objects, drawings, diagrams, and actions.  
• The student uses concrete referents to help justify or refute an argument. | 3 | 3 |

| 1. Concepts and Procedures | SP | P. Summarize, represent, and interpret data on a single count or measurement variable.  
- The student will be able to represent data on the real number line with a dot plot, histogram, or box plot.  
- The student will be able to use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.  
- The student will be able to interpret the differences in shape, center, and spread in the context of the data sets.  
- The student will be able to interpret the effects of outliers on the shape, center, and spread of a data set. | 2 | 6 | 6 |
- Mathematical information from the context is presented in a table, graph, or diagram, or is extracted from a verbal description or pictorial representation of the context. | 2 | 3 | 6 |
|  |  | B. Select and use appropriate tools strategically.  
- Mathematical information is presented in a table, graph, diagram, or equation or is extracted from a verbal description or pictorial representation of a context. | 2 | 3 | 6 |
|  |  | C. Identify important quantities in a practical situation and map their relationships (e.g., using diagrams, two-way tables, graphs, flow charts, or formulas).  
- The student interprets the solution to the problem in terms of the model or compares the results of the model with the real-world data it represents. | 2 | 3 | 6 |
| 4. Modeling and Data Analysis | Modeling and Data Analysis | D. Interpret results in the context of a situation.  
- The student interprets the solution to the problem in terms of the context, in terms of the model, or compares the results of the model with the real-world data it represents. | 2, 3 | 3 | 6 |
|  |  | C. State logical assumptions being used.  
- Students solve problems that involve using stated assumptions, definitions, and previously established results in developing their reasoning. | 2 | 3 | 6 |
|  |  | F. Identify important quantities in a practical situation and map their relationships (e.g., using diagrams, two-way tables, graphs, flow charts, or formulas).  
- Students are presented with a mathematical problem in a real-world context where the quantities of interest are not named explicitly, are named but represented in different ways, or the relationship between the quantities is not immediately clear. | 2 | 3 | 6 |

— Claim 1 Target Descriptions are illustrated by the Evidence Required statements which are provided comprehensively.
— Claim 2, 3, and 4 Targets Descriptions are illustrated by the Task Model Expectations which are aligned to individual interim items.
High School – Create Equations: Linear and Exponential (12 items)
